The Trusted Choice by Veterinarians Worldwide

Vetericyn supports the natural defenses of the skin to improve the animal's skin and coat health.

Vetericyn[®] VF Plus is a next-generation skin cleanser designed to support the natural defenses of the skin to improve skin and coat health. This pH-balanced solution is used for cleansing, irrigating and debriding skin ailments, which sets the stage for optimum healing conditions and provides an advanced alternative to saline solution. Compatible with the natural hypochlorous produced in the animal's body, Vetericyn[®] VF Plus is as safe as it is powerful.

Hypochlorous Acid is a molecule naturally produced by the animal's immune system. Vetericyn[®] VF Plus contains hypochlorous acid, a preservative that may help inhibit the growth of microorganisms within the solution.

+ Proven Effective + Available in Liquid or Hydrogel

THE ULTIMATE PACKAGE for EQUINE ALLERGY MANAGEMENT & THERAPY

SPOTPlatingm

IN-VITRO TESTING

The Ultimate SPOT Package for Equine Patients

A total of 86 allergens are tested from the following panels:

·Regional Panel:

44 regional inhalant allergens including Grasses, Weeds and Shrubs, Trees, Grain Mixes, Barn Dust, Epidermals, Shavings, Leather, Jute/Sisal, Wool and Cotton.

Food Panel:

12 specific equine food ingredients namely: Alfalfa, Barley, Corn, Cottonseed, Linseed, Milo, Oats, Pasture Mix, Soybean, Wheat, Clover Mix and Beet Pulp.

• Mold Panel:

The following 24 molds are tested: Smut mix, Curvularia, Hormodendrum, Helminthosporium, Stemphilium, Candida albicans, Monilia, Cephalosporium, Mucor mix, Trichoderma, Rhizopus, Chaetomium, Phoma, Rhodotorula, Botrytis, Epicoccum, Fusarium, Pullularia, Aspergillus, Nigrospora, Alternaria, Penicillium, Saccharomyces, and Cephalothecium.

• Biting Insect Panel:

Horses exhibiting signs of urticaria are commonly affected by biting insects. The biting insect panel tests for sensitivity to six insects including: Culicoides, Mosquito, Stable fly, Deer fly, Horse

STEROIDS AND TESTING

Several studies have shown that in normal therapeutic doses, steroids have minimal immunosuppressive effect. Therefore, levels of IgE remain the same whether an animal is on steroids at the time of the blood draw or not. Steroids play a role in preventing the degranulation of mast cells and basophils and hence the need to have an animal withdrawn from steroid therapy prior to tests that rely on such degranulation for their results (such as intradermal skin testing). In-vitro allergy tests measure levels of allergen specific IgE and are therefore totally unaffected by the presence of steroids.

Horses are just as likely as people to have allergies.

In fact, more than 30% of all skin and respiratory problems in horses can be attributed to allergies. Allergic reactions are caused by normal substances in the air. Everything from pollen, mold, insects and food can be classified as allergens. It is important to accurately identify the specific allergens that are causing the horse to suffer.

COMMON SYMPTOMS:

respiratory symptoms:

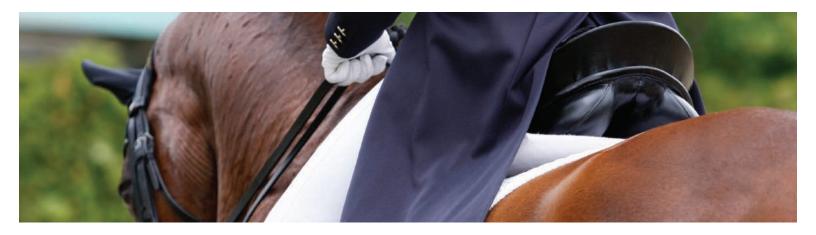

- persistent cough
- audible wheezing
- heaves

dermatologic symptoms

- general skin irritation/hair loss
- urticaria (hives)
- sweet itch ("summer eczema")

gastrointestinal symptoms

DO I NEED TO GO THROUGH MY VETERINARIAN TO HAVE MY HORSE TESTED?

Yes. Your veterinarian will decide if allergy testing is indicated for your horse. Testing involves your Veterinarian drawing a small amount of blood and sending the sample to Spectrum Labs, where the serum will be tested for sensitivity to a variety of allergens common to your region. Our test results will identify the specific allergens that are causing your horse to suffer and allow you to make environmental adjustments and if necessary treatment recommendations from there.

WHAT DOES "TREATMENT" CONSIST OF?

Hyposensitization is often the best, safest and most successful treatment option available for allergies, especially when avoidance isn't possible. Treatment can be administered as allergy shots or allergy drops. It is best to talk with your Veterinarian once you have determined allergies to be the root cause of your horse's symptoms and once you have obtained the allergy report. Regardless of the chosen option, treatment is administered over a period of time to allow your horse's immune system to develop a tolerance to its offending allergens. Improvement in allergy symptoms generally appear three to five months into treatment.

WHAT WILL HAPPEN IF I CHOOSE NOT TO TREAT MY HORSE'S ALLERGIES?

If left untreated, typically symptoms worsen with age. While steroids may offer temporary relief, long-term or continued use of these drugs have undesirable side effects. The only proven, long-term solution for keeping allergy symptoms under control is the safe and effective allergy-specific hyposensitization that Spectrum Labs provides.

Equine allergies can negatively affect the abilities and performance of competition horses and cause great discomfort in pleasure horses and ponies.

Have a show or performance horse? Don't worry! Our treatment will not effect their ability to qualify for upcoming competitions.

Serum Allergy Testing and Treatment Program

Provided by:

LEVOXINE

Levothyroxine is a synthetic thyroid hormone. It usually needs to be given for the life of the horse when the horse is not producing enough thyroid hormone and to correct conditions associated with hypothyroidism.

Item Code: 301-0001 (454g / 1lb)

301-0010 (4.5kg / 10lb)

"The BEST Electrolyte replacement available today"

Perfect for every discipline

Equilytes provides your horse with the electrolytes required to keep them performing at their best.

- Rapid Electrolyte Replacement
 Shortens Recovery Time
 Prevents Muscle Tie-Up
- Great for hauling to minimize fatigue.
 - Contains Chelatrex

Equilytes are chelated minerals attached to amino acids and provides for efficient absorption. Electrolytes are minerals needed for many reactions within the body. Most important is the stimulation of nerve responses. Low electrolyte levels; slow nerve responses. Most common electrolytes are: calcium, sodium, potassium and magnesium. They are found in blood serum. Equilytes can prevent and even reverse "tying up". Other electrolyte products are not chelated and can take up to 6-8 hrs to be absorbed (which is the same as normal feedings i.e. hay and grain). Equilytes can be detected in the blood as soon as ten minutes after ingestion. Equilytes electrolytes are proven to increase performance and condition.

Proven and Effective

During periods of high stress, and strenuous exercise horses can lose up to 50 grams of electrolytes per hour. Resulting in metabolic imbalances, which can lead to dehydration, muscle cramps, and exhaustion. Leaving your horse unable to preform at their potential.

Problem: How can these electrolytes be effectively and quickly replenished during or after strenuous exercise and stress?

Solution: EQUILYTES

Equilytes is an exclusive chelated amino acid-electrolyte formula that is almost immediately absorbed into the horses blood stream after ingestion.

XXTERRA

XXTERRA: An herbal bloodroot based paste for the treatment of equine sarcoids

It works by stimulating the horses immune system. Subsequently, the horses body "rejects" the sarcoid from the inside out.

The tumor(s) will first become inflamed by the immune response and then they will slough off.

BEFORE

DAY 1

DAY 100

How to use:

Apply XXTERRA (a 3-5 mm thick layer) to the sarcoid daily for 3-4 days. When a swelling and superficial wound appears, stop applying. Bandage can be applied if wanted, but not necessary. Let the scab fall off by itself, do not assist the sloughing.

In up to 20% of cases, the sarcoid can re-appear. In these cases, repeat the process. Less than 2% of sarcoids re-appear after a second application.

For animal use only.

Equine dental problems? Equine dental solution!

MAXI/GUARD[®] Oral Cleansing Gel

Aids In The Healing Of:

- Bit sores
- Extraction sites
- Oral injuries

Cleansing

- Abscesses
- Irritations after teeth floating
- Gum inflammation

"I also dispense Oral Gel to owners with horses that have bit sores. It seems to give the horse almost immediate relief from discomfort which allows continued training while the lesions heal. There is no product on the market (human or veterinary) that I have found that performs as well on oral lesions as MAXI/GUARD Gel."

Supplements

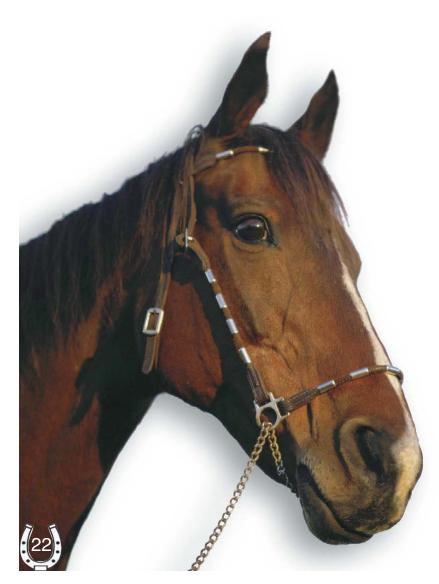

Advantages

- · Each 400 grams is a 30- to 60-day supply for an adult horse
- · Easy and convenient method of supplementation
- · Dramatically improves hoof condition

VET-A-MIX offers quality, research-proven nutritional supplements and drug dosage forms designed specifically for horses. All are manufactured under strict quality control guidelines.

All Vet-A-Mix products are available only through licensed veterinarians.

An easy and convenient biotin and DL-methionine powder for horses.

LLOYD, Inc. 800-831-0004 www.lloydinc.com

How Supplied:

400-gram bottles	.List No.	0551
2,000-gram bottles	List No.	0553

Indications:

For use as a dietary supplement for horses, as an aid in the prevention of biotin and methionine deficiencies.

Feeding Directions:

Convenient teaspoon measure included in each package. The usual amount per day is:

• Ponies:

7.5 milligrams biotin and 2.5 grams DL-methionine (1 slightly rounded teaspoonful).

•1,100-pound (500-kg) horse:

15 milligrams biotin and 5 grams DL-methionine (2 slightly rounded teaspoonfuls).

Heavier horses:

30 milligrams biotin and 10 grams DL-methionine (4 slightly rounded teaspoonfuls).

One slightly rounded teaspoonful weighs approximately 3.5 grams and contains 7.5 milligrams biotin and 2.5 grams DL-methionine.

¹ Comben, N. Clarke, R.J. Sutherland, D.J.B. *Improving the Integrity of Hoof Horn in Equines by High Dietary Supplementation of Biotin*. Presented at the Annual Congress of the British Equine Veterinary Association, September 1983.

Administration:

Bio-Meth powder can be administered by mixing the daily amount in the concentrate or by top-dressing on grain, preferably rolled or ground. To facilitate proper adhesion to the ration, slightly moisten the grain with water or liquid supplement.

Guaranteed Analysis:

Per 2000g

D-Biotin	.0.22%	4,400 mg
DL-Methionine	. 72.3%	1,446,000 mg

Ingredients:

DL-methionine, D-biotin supplement, rice hulls and brown dye.

Hoof Health Maintenance:

Recent studies show that 15 mg of biotin fed daily dramatically improves hoof condition. Usually improvement in hoof horn strength is seen in 3 to 5 months, but biotin supplementation should be continued for 9 to 12 months or more if necessary. Permanent supplementation at a lower nutritional level of biotin may then be adopted to maintain healthy hooves!

Equ-Aid Plus

Advantages

- Selenium and vitamin E to help prevent tying-up syndrome
- · Lysine to improve growth of foals on low-protein diets
- Biotin and methionine, which are essential for hoof formation
- Zinc, to aid in healthy skin and proper enzyme balance
- · Provides a high level of essential unsaturated fatty acids
- Exceptional palatability

Vet-A-Mix offers quality, research-proven nutritional supplements and drug dosage forms designed specifically for horses. All are manufactured under strict quality control guidelines.

Balanced, fortified vitamin and mineral supplement for horses.

LLOYD, Inc. 800-831-0004 www.lloydinc.com

How Supplied:

5 pound jars List 009	97
40 pound pails List 009	98

Indications: A vitamin and mineral supplement fortified with selenium, lysine and methionine for horses and ponies.

Feeding Directions: Feed 2 ounces (one heaping measure) per day to colts and adult horses. Ponies and very small breeds should receive proportional amounts. A 1/3 cup measure is enclosed.

Note: Consider selenium concentrations in the total daily feed intake. The total added selenium should not exceed 0.3 mg/kg (0.3 ppm) in the ration or 3.0 mg selenium per horse per day.

Ingredients: Dicalcium phosphate, yeast culture, wheat bran, vegetable oil, sodium tripolyphosphate, salt, L-lysine monohydrochloride, DL-methionine, linseed meal, zinc oxide, ferrous sulfate, calcium phosphate, vitamin E supplement, magnesium oxide, manganous oxide, calcium pantothenate, biotin supplement, thiamine mononitrate, niacin supplement, copper sulfate, vitamin A supplement, monosodium glutamate, ferric oxide, riboflavin supplement, vitamin B₁₂ supplement, corn distiller's dried grain with solubles, mineral oil, vitamin D₃ supplement, pyridoxine HCl, cobalt sulfate, ethylenediamine dihydriodide, sodium selenite, tetrasodium ethylenediaminetetraacetate, with BHT, BHA, ethoxyquin, propyl gallate, and citric acid, preservatives.

0504

*N.E. = not established

The values for maintenance of a mature horse are based on a 1,100 pound animal consuming 8.2 kg (18.0 lb) of dry feed. From National Academy of Sciences National Research Council Nutrient Requirement of Horses, 5th Revised Edition, 1989. No requirements for niacin have been established for the horse. Niacin can be synthesized from tryptophan, suggesting a dietary source is unnecessary.

Pyridoxine, folic acid and biotin are synthesized in the lower digestive tract of the horse, but information on the dietary requirements is lacking. The requirement for Vitamin B₁₂ has not been reported. However, foals may benefit from receiving supplementation of vitamin B₁₂ and/or cobalt. The individual amino acid requirements for maintenance are not known.

Supplements

Advantages

- Provides dietary selenium in areas where feedstuffs are deficient
- Optimum levels of vitamin E act in synergy with selenium in the prevention of deficiencies
- · An economical alternative to administration by injection

VET-A-MIX offers quality, research-proven nutritional supplements and drug dosage forms designed specifically for horses. All are manufactured under strict quality control guidelines.

All Vet-A-Mix products are available only through licensed veterinarians.

Safe and effective selenium and vitamin E feed supplement for horses

LLOYD, Inc. 800-831-0004 www.lloydinc.com

How Supplied:

1-pound bottles	List No. 0434
5-pound jars	List No. 0435

Indications:

For use as a nutritional supplement in horses, when a vitamin E and selenium deficiency exists.

Feeding Directions:

The normal recommended dosage of selenium is 0.1 ppm to 0.3 ppm or $\frac{1}{2}$ to 1½ teaspoons per 10 pounds (4.5 kg) daily feed intake.

	Recommended Daily Amount
Body Weight	Amount
250 lb (115 kg)	¹ /4 to ³ /4 teaspoon
500 lb (225 kg)	$\frac{1}{2}$ to $\frac{1}{2}$ teaspoons
750 lb (340 kg)	
1000 lb (450 kg)1 to 3 teaspoons

One teaspoonful contains approximately 5 grams of Equ-SeE or 1 mg of selenium and 220 IU of vitamin E.

Administration:

Equ-SeE powder can be administered by mixing the daily amount in the concentrate or by top-dressing on grain, preferably rolled or ground. To facilitate proper adhesion to the ration, slightly moisten the grain with water or liquid supplement.

Warning:

Consider selenium concentrations in the total daily feed intake. The total added selenium should not exceed 0.3 mg/kg (0.3 ppm) in the ration, or 3.0 mg selenium per horse per day.

Guaranteed Analysis per lb:

(All values are minimum quantities unless otherwise stated.)

Selenium	0.02%	90.7 mg
Vitamin E		20,000 IU

Ingredients:

Calcium carbonate, rice hulls, vitamin E (DL-alpha tocopheryl acetate), diatomaceous earth, sodium bentonite and sodium selenite.

Caution:

Follow label directions. The addition to feed of higher levels of this supplement is not recommended. Do not exceed the recommended amounts.

Each package contains a teaspoon measure for accurate administration.

Supplements

Advantages

- Calcium-to-phosphorus ratio of 1.8-to-1 reduces danger of nutritional imbalance
- · Ideal for foals during periods of rapid growth
- · Excellent for pregnant or lactating mares

VET-A-MIX offers quality, research-proven nutritional supplements and drug dosage forms designed specifically for horses. All are manufactured under strict quality control guidelines.

All Vet-A-Mix products are available only through licensed veterinarians.

Natural calcium and phosphorus powder with vitamins.

LLOYD, Inc. 800-831-0004 www.lloydinc.com

How Supplied:

1-pound bottles	List No. 03	66
25-pound pails	List No. 03	67

Indications:

For use as an aid in the prevention of dietary deficiencies of calcium, phosphorus and vitamins A and D.

Do Not Feed to Cattle or Other Ruminants

Dosage: To aid in the prevention of dietary deficiencies, give 1 to 3 slightly rounded tablespoonfuls to foals and 3 to 5 tablespoonfuls to yearlings and adults each day for as long as indicated.

Each slightly rounded tablespoonful of Osteo-Form contains approximately 12 grams. A tablespoon measure is enclosed.

Administration:

Osteo-Form may be added to the daily ration or mixed with milk or water. To facilitate proper adhesion of Osteo-Form to the ration, slightly moisten the grain with water or liquid supplement.

Warning:

When using Osteo-Form as a maintenance dietary supplement, calcium and phosphorus from other food sources should be considered.

Guaranteed Analysis:	Per pound
Calcium, maximum	
Calcium, minimum	
Phosphorus, minimum	16.5%
Vitamin A, minimum	153,000 IU
Vitamin D ₃ , minimum	15,300 IU

Ingredients:

Dicalcium phosphate, bone ash, calcium carbonate, soybean flour, bone meal steamed, polysorbate 80, citric acid, ascorbic acid, vitamin A acetate and cholecalciferol.

GastroCare - For gastric health in Horses

Concerns:

Results:

Stomach pain resulting in: Erratic behaviour Stable vices Irregular feeding Tooth grinding Weight loss Soothes the stomach Reduces possibility of re-occurance Improved behaviour Increased food consumption Improved performance and attitude

Why use GastroCare?

Horses are natural grazers and would if allowed, spend up to 22 hours per day in a field grazing. As such they continually produce gastric acid. The constant grazing should produce enough saliva to balance this acid.

When horses are in training, working or travelling and their feeding regime is reduced to two or three feeds per day they do not produce enough saliva and thus their stomachs have an unnatural build up of acid. That is why 60% of sport or show horses and over 90% of race horses have gastric discomfort.

How GastroCare Works

Neutralises gastric acid. Each intake provides approximately six hours of activity. The soluble fibres absorb some of the excess acid produced and glutamine aids the regeneration of the stomach lining. All in all GastroCare helps and maintains the stomach as normal.

Ingredients

Dicalcium Phosphate, Carbonates (Sodium & Calcium), Pectin - Apple Fibre Complex, L-glutamine

NutriAid - The Equine shock absorber

Concerns:

Joint stiffness Overall Stiffness

Results:

Aids the body's nautural repair of its joints Helps build new cartilage naturally Increases Flexibility

Why use NutriAid?

In the normal day to day life of a horse the joint cartilage is continually being broken down and replacement cartilage is being manufactured. However this balance can be upset due to increased training, trauma, competition or simply old age. Such horses need to be assisted in the maintenance of the cartilage and to reduce risk from further deterioration in the future.

NutriAid is an economical solution to promote long-term joint health.

How NutriAid Works

NutriAid is the most potent joint supplement combination on the market. This is due to its combination of three ingredients: Glucosamine, is an amino acid and assists in the body's manufacture of cartilage. Chondrotin assists in maintaining the lubrication and shock absorbsion of the joints, while MSM is a naturally occurring sulphur compound which help sooth knocks and return joint mobility.

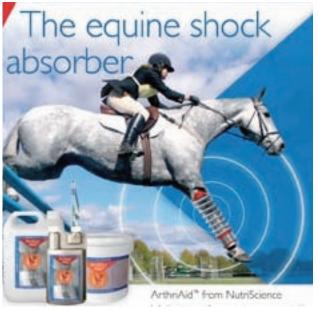

While visible results are seen within 10-14 days, long term use is recommended, particularly in the case of older horses.
