polysulfated glycosaminoglycan  
sterile injection 100 mg/mL

**The only approved equine PSGAG that actually treats the disease and not just the clinical signs of DJD.<sup>1,2</sup>**

Adequan® I.M. (polysulfated glycosaminoglycan - PSGAG) not only reaches joints quickly, but also helps to protect and renew joint mobility. For over 30 years (includes U.S. approval), it's still the only approved equine intramuscular treatment for non-infectious degenerative joint disease (DJD) of the carpal and hock joints proven to:<sup>3</sup>

- **Reduce** inflammation
- **Restore** synovial joint lubrication
- **Repair** joint cartilage
- **Reverse** the disease process

**INDICATIONS** Adequan® I.M. is recommended for the treatment of non-infectious degenerative and/or traumatic joint dysfunction and associated lameness in horses. **IMPORTANT SAFETY INFORMATION**

Adequan® I.M. is for veterinary use only. The prescribing information contains complete use information which includes dosing, contraindications, warnings and cautions. Always read, understand and follow label and use directions. **PLEASE CONSULT** the full Prescribing Information printed on the reverse side of this document or visit [adequanim.arah.ca](http://adequanim.arah.ca)

## Quickly reaches a horse's joints to deliver relief.<sup>4</sup>

After intramuscular administration, Adequan® I.M. (polysulfated glycosaminoglycan) is well absorbed, goes to work fast and keeps working for up to 96 hours.

Hyaluronic Acid [HA] levels nearly doubled at 48 hours with significant increases noted from 24 up to 96 hours.

Clinical significance of the above results is unknown.

## First of its kind. Still one of a kind.

For over 30 years, Adequan® I.M. (polysulfated glycosaminoglycan) is still the only approved equine intramuscular PSGAG joint treatment available. And still the only one proven to:<sup>1,2</sup>

- Reduce** inflammation
- Restore** synovial joint lubrication
- Repair** joint cartilage
- Reverse** the disease cycle

Adequan® I.M. actually treats degenerative joint disease, and not just the signs.

Ask your veterinarian if Adequan® I.M. is the right choice for your horse.

Learn more at [adequanim.arah.ca](http://adequanim.arah.ca) or contact your Canadian distributor:  
Central Sales Limited at 1-800-387-2522 or [customerservice@centsales.ca](mailto:customerservice@centsales.ca)

**Start** with it. **Stay** with it.

**INDICATIONS** Adequan® I.M. is recommended for the treatment of non-infectious degenerative and/or traumatic joint dysfunction and associated lameness in horses. **IMPORTANT SAFETY INFORMATION** For veterinary use only, do not use Adequan® I.M. in horses demonstrating hypersensitivity to PSGAG. This drug is not to be administered to horses that are to be slaughtered for use in food. Keep out of the reach of children. There are no known adverse reactions associated with the use of Adequan® I.M. Not intended for use in breeding animals as effects on fertility and reproductive function in mares and stallions have not been studied. The Adequan® I.M. prescribing information contains complete use, cautions and dosing information. Always read, understand and follow label and use directions. **PLEASE CONSULT** the full Prescribing Information available at [adequanim.arah.ca](http://adequanim.arah.ca) or request by calling 1-888-354-4857.

# IN-VITRO TESTING

## The Ultimate SPOT Package for Equine Patients

A total of 86 allergens are tested from the following panels:

### • Regional Panel:

44 regional inhalant allergens including Grasses, Weeds and Shrubs, Trees, Grain Mixes, Barn Dust, Epidermals, Shavings, Leather, Jute/Sisal, Wool and Cotton.

### • Food Panel:

12 specific equine food ingredients namely: Alfalfa, Barley, Corn, Cottonseed, Linseed, Milo, Oats, Pasture Mix, Soybean, Wheat, Clover Mix and Beet Pulp.

### • Mold Panel:

The following 24 molds are tested: Smut mix, Curvularia, Hormodendrum, Helminthosporium, Stemphilium, Candida albicans, Monilia, Cephalosporium, Mucor mix, Trichoderma, Rhizopus, Chaetomium, Phoma, Rhodotorula, Botrytis, Epicoccum, Fusarium, Pullularia, Aspergillus, Nigrospora, Alternaria, Penicillium, Saccharomyces, and Cephalothecium.

### • Biting Insect Panel:

Horses exhibiting signs of urticaria are commonly affected by biting insects. The biting insect panel tests for sensitivity to six insects including: Culicoides, Mosquito, Stable fly, Deer fly, Horse

## STEROIDS AND TESTING

Several studies have shown that in normal therapeutic doses, steroids have minimal immunosuppressive effect. Therefore, levels of IgE remain the same whether an animal is on steroids at the time of the blood draw or not. Steroids play a role in preventing the degranulation of mast cells and basophils and hence the need to have an animal withdrawn from steroid therapy prior to tests that rely on such degranulation for their results (such as intradermal skin testing). In-vitro allergy tests measure levels of allergen specific IgE and are therefore totally unaffected by the presence of steroids.

Can horses really have  
**ALLERGIES?**

*Horses are just as likely as  
people to have allergies.*

In fact, more than 30% of all skin and respiratory problems in horses can be attributed to allergies. Allergic reactions are caused by normal substances in the air. Everything from pollen, mold, insects and food can be classified as allergens. It is important to accurately identify the specific allergens that are causing the horse to suffer.

### COMMON SYMPTOMS:

#### **respiratory symptoms:**

- persistent cough
- audible wheezing
- heaves

#### **dermatologic symptoms**

- general skin irritation/hair loss
- urticaria (hives)
- sweet itch ("summer eczema")

#### **gastrointestinal symptoms**

**Serving the Veterinary Community Since 1953**

CENTRAL SALES

## **DO I NEED TO GO THROUGH MY VETERINARIAN TO HAVE MY HORSE TESTED?**

Yes. Your veterinarian will decide if allergy testing is indicated for your horse. Testing involves your Veterinarian drawing a small amount of blood and sending the sample to Spectrum Labs, where the serum will be tested for sensitivity to a variety of allergens common to your region. Our test results will identify the specific allergens that are causing your horse to suffer and allow you to make environmental adjustments and if necessary treatment recommendations from there.

## **WHAT DOES "TREATMENT" CONSIST OF?**

Hyposensitization is often the best, safest and most successful treatment option available for allergies, especially when avoidance isn't possible. Treatment can be administered as allergy shots or allergy drops. It is best to talk with your Veterinarian once you have

determined allergies to be the root cause of your horse's symptoms and once you have obtained the allergy report. Regardless of the chosen option, treatment is administered over a period of time to allow your horse's immune system to develop a tolerance to its offending allergens. Improvement in allergy symptoms generally appear three to five months into treatment.

## **WHAT WILL HAPPEN IF I CHOOSE NOT TO TREAT MY HORSE'S ALLERGIES?**

If left untreated, typically symptoms worsen with age. While steroids may offer temporary relief, long-term or continued use of these drugs have undesirable side effects. The only proven, long-term solution for keeping allergy symptoms under control is the safe and effective allergy-specific hyposensitization that Spectrum Labs provides.

Serum Allergy Testing  
and Treatment Program

Equine allergies can negatively affect the abilities and performance of competition horses and cause great discomfort in pleasure horses and ponies.

**Have a show or performance horse?**  
Don't worry! Our treatment will not effect their ability to qualify for upcoming competitions.

# XXTERRA

**XXTERRA: An herbal bloodroot based paste for the treatment of equine sarcoids**

It works by stimulating the horses immune system. Subsequently, the horses body “rejects” the sarcoid from the inside out.

The tumor(s) will first become inflamed by the immune response and then they will slough off.

BEFORE

DAY 1

DAY 15

DAY 30

DAY 100

#### How to use:

Apply XXTERRA (a 3-5 mm thick layer) to the sarcoid daily for 3-4 days.

When a swelling and superficial wound appears, stop applying.

Bandage can be applied if wanted, but not necessary.

Let the scab fall off by itself, do not assist the sloughing.

In up to 20% of cases, the sarcoid can re-appear.

In these cases, repeat the process. Less than 2% of sarcoids re-appear after a second application.

#### For animal use only.

# Equine dental problems? Equine dental solution!

## MAXI/GUARD® Oral Cleansing Gel

### Aids In The Healing Of:

- Bit sores
- Extraction sites
- Oral injuries
- Abscesses
- Irritations after teeth floating
- Gum inflammation

*"I also dispense Oral Gel to owners with horses that have bit sores. It seems to give the horse almost immediate relief from discomfort which allows continued training while the lesions heal. There is no product on the market (human or veterinary) that I have found that performs as well on oral lesions as MAXI/GUARD Gel."*

## GastroCare - For gastric health in Horses

### Concerns:

Stomach pain resulting in:  
 Erratic behaviour  
 Stable vices  
 Irregular feeding  
 Tooth grinding  
 Weight loss

### Results:

Soothes the stomach  
 Reduces possibility of re-occurrence  
 Improved behaviour  
 Increased food consumption  
 Improved performance and attitude

### Why use GastroCare?

Horses are natural grazers and would if allowed, spend up to 22 hours per day in a field grazing. As such they continually produce gastric acid. The constant grazing should produce enough saliva to balance this acid.

When horses are in training, working or travelling and their feeding regime is reduced to two or three feeds per day they do not produce enough saliva and thus their stomachs have an unnatural build up of acid. That is why 60% of sport or show horses and over 90% of race horses have gastric discomfort.

### How GastroCare Works

Neutralises gastric acid. Each intake provides approximately six hours of activity.

The soluble fibres absorb some of the excess acid produced and glutamine aids the regeneration of the stomach lining. All in all GastroCare helps and maintains the stomach as normal.

### Ingredients

Dicalcium Phosphate, Carbonates (Sodium & Calcium), Pectin - Apple Fibre Complex, L-glutamine

## NutriAid - The Equine shock absorber

### Concerns:

Joint stiffness  
Overall Stiffness

### Results:

Aids the body's natural repair of its joints  
Helps build new cartilage naturally  
Increases Flexibility

### Why use NutriAid?

In the normal day to day life of a horse the joint cartilage is continually being broken down and replacement cartilage is being manufactured. However this balance can be upset due to increased training, trauma, competition or simply old age. Such horses need to be assisted in the maintenance of the cartilage and to reduce risk from further deterioration in the future.

NutriAid is an economical solution to promote long-term joint health.

### How NutriAid Works

NutriAid is the most potent joint supplement combination on the market. This is due to its combination of three ingredients: Glucosamine, is an amino acid and assists in the body's manufacture of cartilage. Chondroitin assists in maintaining the lubrication and shock absorption of the joints, while MSM is a naturally occurring sulphur compound which help soothe knocks and return joint mobility.

While visible results are seen within 10-14 days, long term use is recommended, particularly in the case of older horses.
